

EMERGENCY SUPPORT FUNCTION 9: SEARCH AND RESCUE

Responsibility Summary

Primary Agencies	Columbia County Sheriff's Office Columbia County Emergency Management
Support Agencies	Columbia Fire District's 1, 2 & 3 Columbia County Emergency Medical Services Columbia County Public Safety Communications Center Central and Southeastern Chapter of the American Red Cross Amateur Radio Emergency Services Public Information Officer WA State Dept of Transportation Aviation Division US Coast Guard

I. INTRODUCTION

Purpose

Emergency Support Function (ESF) 9 – Search and Rescue describes the coordination and organization of capabilities and resources in Columbia County utilized in Search and Rescue missions. RCW 38.52.010(7) states that Search and Rescue is "...the act of searching for, rescuing, or recovering by means of ground, marine, or air activity any person who becomes lost, injured or is killed while outdoors or as a result of a natural or man-made disaster..."

Scope

This ESF is applicable to situations within the county when it will be necessary to provide Search and Rescue (SAR) missions for emergencies or disasters.

Search and Rescue (SAR) operations are classified in several ways such as Land, Air, Urban and/or Marine. The SAR missions are conducted utilizing available resources to assist persons and property in potential or actual distress.

Land based search and rescue is the capability to coordinate and conduct search and rescue response efforts for all hazards, including searching affected areas for victims, locating them, accessing the situation, medically stabilizing and extricating victims from the damaged area. SAR efforts are similar with some exceptions, the incident would be classified as Urban SAR when victims are trapped in a structural collapse (this may be infrastructure such as a building or land collapse such as a cave or mine); Marine SAR efforts are search efforts conducted on or near a body of water and Air SAR efforts are conducted using aircraft.

In Columbia County, the highest propensity of SAR events are land based efforts focused on hikers lost within the forests of the County. The command and coordination guidelines for Columbia County will be discussed within this ESF 9.

Policies

The Sheriff has primary responsibility for all search and rescue missions involving lost or stranded persons within the County, this includes the City of Dayton and Town of Starbuck. Upon request from other jurisdictions, the County Sheriff's Office will respond to any other city, and occasionally, to other counties within the state under a mutual aid system. The Sheriff also activates during natural disasters such as wildfires, flooding, and earthquakes and/or human-caused incidents to perform SAR services as needed.

Per RCW 38.52.400, Columbia County Emergency Management shall support the coordinated efforts of the primary and support agencies during prevention, protection, mitigation, response and recovery activities. The policies and procedures used by Columbia County for resource management are based upon the Incident Command System (ICS) which is part of the National Incident Management System (NIMS). EMD's goal will be effective logistics management to ensure that all functions are executed in a unified manner in order to maintain accountability, ensure appropriate support actions are in place and improve distribution efficiency before, during and after an emergency or disaster.

Regardless of the scale of the disaster, the goal of ESF 9 is to coordinate resources that will help responders search affected areas for victims, locate them, access the situation, provide medical stabilization and extricate victims in an emergency or disaster quickly. Columbia County is a small community with limited resources however, aiding in this process, the county does have an existing delivery service system within the public and private arenas that currently serve to meet identified needs for people in emergency situations. ESF 9 is prepared to leverage this service delivery network to help respond to an expanded need prior to, during and after an emergency or disaster.

II. SITUATION

Hazard and Threat Analysis

The Community faces a variety of hazards and/or threats which could manifest from natural causes (earthquake, flood, wildfire), technological (airplane crash, dam failure, train derailment), or human-caused (school/workplace violence, chemical/explosives attack) that might create a need for SAR activation. Columbia County's *Community Wildfire Protection Plan* and the *Southeast Washington Multi-Hazard Mitigation Plan* provide a comprehensive analysis of the risks and recommended protection and mitigation measures for all jurisdictions within the county and awareness of the threats facing our communities.

The wide range of and easy access to outdoor recreational activities in Columbia County and the number of people who participate in those activities (boating, fishing, snow and water skiing, hiking, hunting, camping), results in a significant number of people becoming lost, injured or killed. The vast forested and rangeland within the county will likely create communication issues for those lost and for SAR responders.

There are many kinds of emergencies or disasters that can result in SAR operations including mass casualty events resulting in large scale SAR activation.

Planning Assumptions

Rapid assessment of the involved areas will be initiated to determine critical needs and priorities. Resources, including personnel, will be identified, prioritized, and managed based on critical needs.

SAR missions will continue to increase as the population, recreational opportunities, and the wild land/urban interface continue to grow.

The widely differing terrain and climatic conditions in the county mandate a locally based SAR first response system.

Natural and technological disasters will greatly increase the scope of SAR operations.

Local residents and unaffiliated volunteers may initiate activities to assist in SAR operations and will require coordination and direction. Emergency Worker registration and training events should be planned prior to seasons that draw tourists into recreational areas of risk (snow season, harsh weather, and fire seasons).

GIS will play a critical role in providing maps of potential search areas to increase responder efficiency and effectiveness in search activities and in providing life safety.

In larger scale incidents a Safety Officer may need to be activated. For example, during an Urban SAR event, the structure will have to be assessed for damage and determined safe for responders to enter to prevent an increase in the number of potential victims.

Communication equipment/systems may become unavailable, overloaded or damaged and coordination efforts may be or hindered (managed jointly between ESF 2 and ESF 9).

Disaster response and recovery efforts may exhaust departmental resources and require county, state, and/or federal assistance to obtain supplemental assets.

III. CONCEPT OF OPERATIONS

General

Search and rescue operations are initiated and directed by the Columbia County Sheriff in accordance with state and local jurisdiction plans. However, one political subdivision may not be able to provide the necessary equipment or sufficient numbers of trained personnel to successfully carry out a SAR mission. Search and Rescue Mission information can be tracked within a mission data sheet to track incident specific information and resources (Appendix A). Columbia County will access all applicable mutual aid agreements available during an incident when additional resources are required. In addition, requests for resources with special skills, expertise, or equipment are escalated to the State EOC following the resource request process outlined within the WA State Comprehensive Emergency Management Plan.

The local Emergency Management Director or his/her designee coordinates support for SAR operations within the County's jurisdiction; this includes emergency worker registration. The information provided during worker registration may be used to conduct criminal history and other background checks, identify specific qualifications and/or specialty equipment. Failure to truthfully respond to statements set forth on the registration form may result in the denial of registration, revocation of registration as an emergency worker, or denial of compensation for claims or damage. Emergency Worker registration, training documentation, identification cards and daily tracking sheets can be seen at Appendices B, C, and D.

Depending on the degree or complexity of the incident, Columbia County may have to utilize emergency workers. Officials using emergency workers have the responsibility to ensure those workers are registered through Columbia County Emergency Worker Program. Officials organizing and using emergency workers are responsible for assembling the proper combination of emergency workers with the skills and abilities to accomplish the mission being undertaken. It is acknowledged that authorized officials must use judgement and experience in assessing the scene and the requirements for the missions.

Many Search and Rescue efforts require specialized training and/or equipment, which the County may not have readily available.

- Air SAR: RCW 47.68.380 and WAC Chapter 468.200 identify the Washington State Department of Transportation Aviation Division, which may involve the civil air patrol, as the responsible for missing aircraft search and coordinating the air resources at the state and/or state mobilization level for Land SAR. Columbia County does have a few residents with crop management planes which can be accessed for SAR efforts
- Urban SAR: Urban SAR is normally the responsibility of the local jurisdiction in which the incident occurs. Again, Urban SAR incidents require very specialized equipment and trained personnel to locate victims of a collapsed structure incident; and to ensure the safety of responders to an incident.
- Marine SAR: Again, marine SAR is normally the responsibility of the local jurisdiction. However, for certain missions it may be necessary to call upon additional resources from

agencies responsible for waterway and/or Lock and Dam management (i.e. US Coast Guard and/or US Army Corp of Engineers).

This ESF serves as a guideline for those in command of search and rescue efforts. Many of the agencies with responsibilities outlined within this ESF have existing emergency plans and procedures. This ESF is not designed to take the place of existing standards of operation; rather it is designed to supplement these plans. SAR may also be used at the discretion of the sheriff for various incidents or occurrences as deemed appropriate by the sheriff.

When the effects of an incident impact the life and health of the people, property and infrastructure within Columbia County, the elected officials of the impacted jurisdictions can institute a declaration of emergency to increase the resources available from outside the local jurisdiction to aid the Incident Commander in obtaining the necessary resources to meet mission objectives.

If a multi-jurisdictional SAR operation occurs, the State Rescue Coordination Center (RCC) may be activated to provide coordination and support for all organizations involved.

Once the Columbia County Sheriff’s Office requests a mission number from the state duty officer either directly or via Columbia County ECC, the Sheriff must keep the State EMD duty officer or SEOC and Columbia County ECC advised of progress until the mission is terminated with the state.

Organization

The Columbia County Sheriff’s Office or designee is responsible for SAR operations within his/her jurisdiction. The Columbia County EMD director will coordinate direct support to SAR agency responders and registered volunteers. Local programs also provide training and education for volunteer SAR units as well as for the organization and deployment of SAR resources.

Direct SAR Groups	Type Mission
Columbia County Sheriff (CCSO)	Land/Ground SAR
Civil Air Patrol	Air Search
Walla Walla	Air Search – Mutual Aid
Spokane	Air Search – Mutual Aid
American Red Cross	Individuals
Support SAR Groups	Type Mission
Equine Emergency Workers	Land/Ground
Hiking Emergency Workers	Land/Ground
Snow Mobile Emergency Workers	Land/Ground – Winter
Four Wheeler Emergency Workers	Land/Ground – Off Road
Airplane Emergency Workers	Air Search
Boat Emergency Workers	Marine Search – Local Rivers

SAR deployments are coordinated through the Columbia County Sheriff's Office SAR Coordinator and/or his or her designee.

Procedures

Law enforcement response will be in accordance with their SOPs and the Columbia County Comprehensive Emergency Management Plan.

The Columbia County Sheriff is the point of notification for events requiring response by ESF 9 agencies. Calls may initially come into other agencies such as Columbia County Emergency Management, Columbia County Public Safety Communications (911), Columbia County Hospital District and/or local clinics. These organizations, will in turn notify the CCSO. This notification may be to advise of a potential event or to forward a request from another local jurisdictions requesting assistance.

Prior to deployment of SAR resources, essential information is gathered such as terrain, identification of the search area, and a detailed description of the victim and their circumstances, if available. Necessary resources will be identified such as K-9, horses, extraction equipment, vehicles etc. Depending upon the availability of resources, a state mission number may be requested at the initial response.

Should additional resources be required, request from the County to the State can be accomplished via different methods depending upon availability:

- State Incident Management System (WebEOC if ECC is activated);
- Request for Assistance (RFA) form, statewide request form;
- Phone or email; or
- Radio Amateur Civil Emergency Service (RACES-two way radio providing back-up communications for responders).

The Washington Intrastate Mutual Aid System (WAMAS), established in RCW 38.56, provides for in-state mutual assistance among member jurisdictions. WAMAS does not replace current mutual aid agreements; it is a mutual aid tool to use when other agreements do not exist.

Out-of-state mutual aid resources are requested through the Emergency Management Assistance Compact (EMAC), established by Public Law 104-321, or the Pacific Northwest Emergency Management Arrangement (PNEMA), established in Public Law 05-381.

The State EMD, when notified of a SAR mission by the Columbia County Sheriff's Office or designee, will issue a state mission number. The issuance of this mission number authorizes the employment of volunteers under the provisions and protection of RCW Chapter 38.52. Multi-jurisdictional SAR operations may be coordinated by the state EMD, when requested. Major

multi-jurisdictional SAR operations resulting from a natural or technological disaster may require the activation of the State Regional Coordinating Center (RCC). The state RCC may either be co-located with the state EOC or at a location in proximity to the incident site. The Director of the State RCC is the State SAR Coordinator.

Mitigation

SAR is largely a response function. Because some SAR events in Columbia County are water-based, education of the public in water safety and survival can help reduce the number of water rescue emergencies.

Each law agency should identify hazards and risks in their jurisdiction; actions to reduce the likelihood of these events occurring, and/or reducing the impact if they were to occur. Plans should be developed or updated to overcome identified vulnerabilities.

Law enforcement can also implement safety and SAR prevention programs to better prepare local citizens and support preventive search and rescue, aviation safety, and survival programs with available resources, when requested.

The sheriff's office maintains mutual-aid agreements with surrounding counties and state agencies from which SAR support could be requested.

The Columbia County Emergency Management Department (EMD) will work with all law enforcement agencies within the county in prevention, protection, mitigation, response and recovery missions. These efforts will include the coordination and the planning for training of personnel qualified to participate in SAR operations.

Preparedness

Each law enforcement agency can help prepare for SAR situations by keeping their policies and procedures current and relative to identified potential hazards and risk analysis. Also, each agency needs to be involved with the development and maintenance of this emergency plan.

EMD and the CCSO coordinate with appropriate departments and agencies within the county, to ensure that those with search and rescue service capabilities have appropriate plans and procedures in place to support their assigned emergency mission.

Support agencies should develop and maintain an inventory of personnel and equipment capabilities and resources, noting availability and response criteria, and noting any deficiencies or limitations in respect to supporting this ESF (including emergency contact lists, resource lists, departmental/functional plans, procedures, protocols, and ECC job aids). Also, develop and maintain appropriate standards of operating procedures (SOPs) in support of their mission,

support of this ESF, and train personnel to that standard. This information is requested to be shared with the EMD for central coordination of response capabilities.

Ensure after action reports are completed documenting the incident, what went well, where are the gaps/shortfalls, if any, and develop training and/or exercises to improve response capabilities. ESF 9 and agency SOP's should be reviewed regularly and updated as needed based on this analysis and other lessons learned. Ensure necessary supplements to ESF 9 are developed and maintained.

Pre-incident coordination and planning activities conducted by EMD and/or CCSO in the preparedness phase include developing operational and tactical plans, training and exercising, and conducting vulnerability assessments. This phase also includes ongoing SAR protection activities such as provider education, water safety, outdoor recreational safety and other educational activities which have the potential to reduce risk of SAR activation and/or emergencies or disasters.

Law enforcement agencies can train personnel, try out and test equipment and communications, and evaluate this emergency plan and SOPs by actively participating in emergency exercises and drills.

Develop and maintain lists of resources of other agencies such as Civil Air Patrol, off-road vehicle associations, American Red Cross, Amateur Radio or other local agencies that could assist law enforcement during SAR incidents. Law enforcement will establish and maintain liaison with these agencies for the use of their personnel and equipment for special emergency assignments. Law enforcement will assure that these resource lists are shared with Columbia County EMD.

Volunteer SAR resources should be regularly evaluated and capabilities updated. Training events should be coordinated by the local DEM as needed.

Response

As needed, the CCSO will conduct a situation assessment and notify appropriate ESF 9 agencies. The initial assessment can be coordinated with the Emergency Management Department, if needed. The Incident Commander will assess the need to activate the Columbia County ECC and coordinate this effort with Columbia County EMD. When the Columbia County ECC is activated, CCSO will determine staffing needs and the appropriate ESF 9 personnel of the ECC facility. CCSO will make any further notifications or request ECC to make notifications in accordance with internal plans, procedures, or practices.

Incident response will be guided by the CEMP Basic Plan, ESF 9, as well as the response plans of supporting agencies, which are consistent with the National Response Framework. ESF 9 response partners will follow National Incident Management System (NIMS), using the Incident

Command System (ICS) principles and will strive to incorporate NIMS in to all plans, protocols, and training.

CCSO will activate Incident Command as appropriate, to establish overall response and recovery objectives, coordinate incident information with ESF 9 agencies, and manage the acquisition and use of SAR resources. Response activities and resources will be identified and selected based on suitability and availability for the type of search and/or rescue.

The Incident Commander (IC) needs to promptly identify a staging area, and assign someone as the staging officer. The IC will assign personnel to specific areas or tasks, and coordinate and assign resources. Law enforcement may need to coordinate their command with fire service or emergency medical service command, and special groups such as the FBI, ATF, FAA, NTSB, or other government agencies may also be involved.

In the case of a SAR event, ESF 9 partners should anticipate high demand for information from the media. Accurate, clear and coordinated risk communication messaging to the public will help preserve human life and health. The IC should consider the need to activate the County PIO.

Recovery

Each department, agency and individual shall maintain accurate records of the incident. They will be responsible for maintaining SAR and recovery expense records for future possible reimbursement. Financial issues such as supplies used, equipment lost or damaged, wages for hours worked including overtime, and other costs require documentation before reimbursement is issued. If emergency vehicles, communications equipment, or stations are damaged, special contracts may be needed for their quick repair or replacement, and temporary or long-term arrangements may be needed.

During the recovery phase, it is imperative to maintain communication and coordination with the ECC. Law enforcement departments or the County PIO may provide public information regarding safety issues as people return to their homes and businesses. Departments, districts, and individuals involved in the emergency or disaster should participate in post event reviews and critiques, and contribute to written reports regarding observations and recommendations.

Law enforcement will assist in the return of all SAR organization's equipment and personnel to a high state of preparedness, so as to be able to respond to future SAR missions with available resources, when requested.

Support for law enforcement and SAR personnel are also part of recovery and returning to normal operations. This support may include counseling, or Critical Incident Stress Management (CISM). CISM is available, at no charge, through the office of the Columbia County EMS coordinator.

IV. RESPONSIBILITIES

Primary Agency

Columbia County Sheriff's Office:

- Initiate SAR operations.
- The sheriff will designate a deputy as SAR Coordinator and provide SAR training for that individual.
- Maintain Standard Operating Procedures (SOP) for conducting searches. Review at least annually for possible revisions.
- Call out volunteers, as needed.
- Notify State EMD and obtain a state mission number, unless County EMD has been directed to do so.
- Contact State EOC for mission number when aircraft are needed.
- After an operation is completed verify with EMD the personnel and resources that were utilized during the operation.
- Assist local organizations with the recruiting and training of volunteers.
- Promote emergency survival preparedness programs for all who may participate in SAR operations.

Columbia County Emergency Management Department:

- When requested, notify state EMD and obtain a state mission number. This number is necessary for liability coverage and possible compensation but must be obtained before volunteers are used in an SAR operation.
- Register volunteers and emergency workers.
- Coordinate any requests for state, federal or out of county SAR resources that are needed or are being used.
- Notify county commissioners when a Level 3 is reached and request activation of an Emergency Coordination Center (ECC), if appropriate.
- Notify the county's Emergency Public Information Officer when a Level 3 is reached.
- Provide state EMD with periodic status reports.
- Assist emergency workers with submission of any claims that might be appropriate.
- Make final reports to state EMD to close out missions.
- Review and revise this ESF, if needed, after any major SAR operation or at least every four years.
- Assist the sheriff's office in recruiting and training of volunteers.
- Assist the sheriff's office in maintaining a current inventory of SAR resources.

Support Agencies

Columbia County Emergency Medical Services

- Provide medical treatment to on scene personnel or victims of the search and rescue.

Emergency Public Information Officer

- Provide information, a coordinated message at the direction of the Incident Commander regarding statistics pertaining to the search and rescue.

Fire Districts 1, 2, &3

- Provide additional manpower or specialized equipment when necessary or requested.
